

# Common Syrphids in Western Orchards

## Glossary

Calipter: thin, membranous flap underneath wing  
 Katepimeron: thoracic sclerite between wing insertion point and sternites  
 Mesoscutum: middle segment of thorax  
 Scape: first antennal segment  
 Scutellum: rounded, triangular sclerite oriented posteriorly from apical margin of mesoscutum  
 Trochanter: leg segment between coxa and femur  
 Tuberle: nose-like projection on face between antennae and mouthparts

This key is intended to separate those taxa commonly encountered in HIPV-based trapping programs in western orchards.
